

ATIS MANUSTRAKAN

(954) 531-3784 | Oviedo, FL | atismanustrakan1@gmail.com | github.com/atismanustrakan1-cyber

EDUCATION

University of Central Florida <i>Bachelor of Science in Computer Science</i> • GPA: 3.6/4.0 Honors: Dean's List, Bright Futures Scholarship, Director's Award • Relevant Coursework: Computer Science I, Discrete Structures, Computer Logic & Organization, Security in Computing, Object-Oriented Programming	Orlando, FL <i>Expected May 2028</i>
--	---

TECHNICAL SKILLS

Languages: Java, Python, C
Frameworks: React, Node.js, Express.js
Technologies: REST APIs, AI Integration, Data Processing, Git Version Control
Tools: GitHub, VS Code, Eclipse

PROJECTS

GatorPlanner <i>TypeScript, React, Node.js, Gemini API</i> • Architected an advanced AI-powered stock analysis platform supporting multiple daily data points, designed to generate dynamic, personalized investment insights for retail traders. • Integrated the Google Gemini API with asynchronous market pipelines to aggregate and visualize real-time stock performance metrics. • Engineered automated backend data-processing workflows in Python, and optimizing the predictive accuracy of the core machine learning recommendation engine.
NutriPlanner <i>Python, Gemini API, REST APIs</i> • Built and launched a comprehensive AI-driven nutrition tracking application, delivering highly personalized dietary guidance. • Leveraged natural language processing capabilities via the Gemini API to construct a robust adaptive guidance system. • Designed and documented scalable RESTful APIs to process complex data pipelines, systematically identifying macro consumption trends to refine recommendation algorithms.

EXPERIENCE

Team Lead <i>KnightsHacks</i> • Directed a 3-person cross-functional engineering team to architect, develop, and deploy a full-stack software solution from ideation to production. • Streamlined agile development workflows and managed version control, resulting in reduction in merge conflicts and accelerating feature integration. • Spearheaded the debugging of critical backend system failures and optimized query payloads, increasing overall application response speed by final presentation.	Feb 2026 <i>Orlando, FL</i>
Software Developer (Hackathon) <i>SASEHacks</i> • Engineered 4 core application features and collaborated closely with teammates to accelerate iterative development cycles in a high-pressure, resource-constrained environment. • Executed comprehensive testing protocols with unit tests across the codebase, ensuring system uptime and eliminating critical runtime errors prior to deployment.	Mar 2026 <i>Gainesville, FL</i>
Undergraduate Researcher — Secure & Fault-Tolerant LLMs <i>University of Central Florida</i> • Investigating the security, fault tolerance, and performance of open-source LLMs deployed on embedded systems and mobile devices. • Using C/C++ and Python to evaluate LLM runtime behavior under hardware faults, memory corruption, and system constraints. • Contributing to development and testing of LLM runtime and core-engine software for resource-constrained computing environments.	Fall 2026 – Present <i>Oviedo, FL</i>
