EDUCATION

University of Central Florida

Bachelor of Science in Computer Science

Orlando, FL

Expected May 2028

- **GPA:** 3.65/4.0 | **Honors:** Dean's List, Bright Futures Scholarship, Director's Award
- **Relevant Coursework:** Computer Science I, Discrete Structures, Computer Logic & Organization, Security in Computing, Object-Oriented Programming

TECHNICAL SKILLS

Languages: Python, C, Java, JavaScript, TypeScript

Frameworks/Libraries: React, Node.js, Express.js

AI/LLM: MLC LLM, vLLM, ThunderAgent, Gemini API

Technologies: REST APIs, Git, Metal GPU, LLM Inference, Data Processing

Tools: GitHub, VS Code, Xcode, CMake, Conda

EXPERIENCE

Undergraduate Researcher — Secure & Fault-Tolerant LLMs

Fall 2026 – Present

University of Central Florida

Orlando, FL

- Deployed and benchmarked open-source LLM inference using MLC LLM, vLLM, and ThunderAgent across local runtime environments.
- Benchmarked 4-bit Qwen2.5-0.5B-Instruct on Apple Silicon with Metal GPU acceleration, achieving up to 107 tokens/sec decoding throughput.
- Investigating LLM runtime security and fault tolerance, including memory corruption, bit-flip faults, and performance optimization for embedded systems.

Undergraduate Researcher – Wearable Smart Insole Project

Fall 2026 – Present

University of Central Florida

Orlando, FL

- Selected to develop a wearable smart insole integrating plantar-pressure sensors and an IMU for synchronized gait and motion data collection.
- Joining development of a compact, battery-powered embedded system for at-home gait monitoring and walking evaluations.

Team Lead

January 2026 – May 2026

Knights Hacks

Orlando, FL

- Led a 3-person team to design and deploy a full-stack application, coordinating development and Git workflows.
- Debugged backend failures and optimized API payloads to improve application performance before final presentation.

PROJECTS

GatorAnalyst | *TypeScript, React, Node.js, Gemini API*

- Built a full-stack stock analysis platform using TypeScript, React, and Node.js to aggregate and visualize market data and company metrics.
- Integrated the Gemini API with market data sources to generate AI-assisted stock analysis and personalized investment insights.
- Developed backend data-processing workflows and REST API integrations to retrieve, transform, and present financial data.

NutriPlanner | *Python, Gemini API, REST APIs*

- Built an AI-powered nutrition planning application using Python and the Gemini API to generate personalized meal and dietary recommendations.
- Integrated REST APIs to process user nutrition data, track macronutrient intake, and generate recommendations based on individual goals.
